March 2016

Number 3

PREZ
SEZ:

Where did the month go? I believe someone stole the first week in February, it was just gone, no trace left. I don't know what happened to it.

We enjoyed the month here in Florida and plan to return again next year; it's just a great way to spend the cold time in sunny FL. Now we're in Disney's Fort Wilderness and it is another wonderful place to escape the cold weather.

This issue should have more reports from the contest. I wish I had been able to make the wrap up to hear the reports first hand. At least this issue will summarize club results. Results from the 3830 site are promising for the club individual standings.

I was extremely encouraged by the discussions on using CW in the contest to make weak signal contacts. This is such an effective mode to snag more grids. One idea that surfaced is the use of CW for net check ins. I think before the next contest that will be a valuable exercise.

Using CW in a contest does not require as much effort as if you were going to hold a conversation. First of all you can anticipate what is going to be sent. You know you have to copy a call sign, and that there will be only one number in the call sign. There are a few trivial connector phrases, and a grid. You know that the grid will begin with either an E or an F, another letter and two numbers. That's it. Then it's good to send and recognize two more numbers: 73 to close the contact. I think maybe we'll run a two meter net on CW before the June contest. **Any volunteers**

for net control?

Another valuable tool in keeping or developing your CW skills is the free program "Morsrunner". You need to keep this program around, it really helps when it's time to prepare for a contest.

In our quest to work as many of the club members as possible we have an add-on to the N1MM program that will keep and maintain a graphical account of what members you have worked and what members you need, and on what bands. **Roger, W3SZ has tapped into the database of N1MM and provided this valuable resource.** Maybe we can do a demo of it in an upcoming meeting. It's a good reason to move to the N1MMplus program for your logging. It's even endorsed by W3KM who now provides the call history file for the program. It's also a great way to keep assistance spots in front of you while you are in action during a contest. You really need the advantage of assistance within the logging program to keep yourself focused and have lots of information at your fingertips.

The meeting this month is "Home Brew Night" and as always we meet at Giuseppe's beforehand at 6PM with the meeting beginning at 7:30. Bring your latest project and show it to the group.

The list of attendees to the VHF Super Conference continues to grow. You need to get your call on that list. Go to: vhfsuperconference.com and add your name to the list. There won't be another conference like this one for a long time. Lets make sure our club is well represented.

Pack Rats **CHEESE BITS** is a monthly publication of the
Mt. AIRY VHF RADIO CLUB, INC. -Abington, PA.

We operate on a .PDF exchange basis with other non-commercial publications. Anything that is printed in CHEESE BITS may be reprinted in a not for profit publication, unless stated otherwise, provided proper credit is given. Deadline for articles and swap-shop is the monthly meeting date. Non-commercial swap-shop items free of charge.

MONDAY / TUESDAY NIGHT NETS

VHF/UHF Monday:

<u>TIME</u>	<u>FREQUENCY</u>	<u>NET CONTROL</u>
7:30 PM	50.145 MHz	N3RG FM29ki Ray
8:00 PM	144.150 MHz	K3GNC FN20ja Jerome
8:30 PM	222.125 MHz	KB1JEY FN20je Michael
8:30 PM	224.58R MHz	W3GXB FN20jm Bob
9:00 PM	432.110 MHz	WB2RVX FM29mt Mike

Microwave Tuesday:

7:30 Coordinate QSO's on 144.260 for all Microwave bands you'd like to work. Also setup Q's at w4dex.com/uhfqso or **Packrat Chat**

Page W3SZ.COM

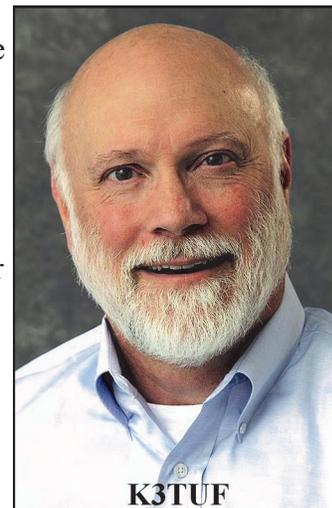

Visit the Mt Airy VHF Radio Club at: www.packratvhf.com or www.w3ccx.com

Three of the spring sprints happen in the month of April; the 11th is the 144MHz Sprint, the 19th is the 222MHz Sprint and the 27th is the 432MHz Sprint.

The June VHF Contest will be here before you know it, get your calendar cleared and be ready to come to Camelback from June 10 to 13. Setup begins just after lunch on Friday with the Contest beginning on Saturday as usual. Then when the contest is over the tear down takes place on Monday morning. We need your support. It will be a fun weekend and I hope to see you there.

That's all from down south for now. See you next month when we hope to work on lots of bands,
73,

Phil, K3TUF

PACKRAT CHAT PAGE

THANKS to Roger W3SZ, the Packrats now have an internet Chat Page that can be used to set up Microwave QSO's on our "Microwave Tuesdays", or for coordinating QSOs whenever you want.

This should also be a great meeting place for use in contests that allow spotting.

The Chat Room is at W3SZ.COM

Just enter your call in the box provided and click the "Login as Guest" box. As of now, no password is required to use the chat.

K3IPM "Tower" Plans

Stan reports that his plans for the 2017 January Contest include using TWO man-lifts to hold the antennas. The mobile trailer tower will not be used.

Guess the single man-lift this year worked out well.

Contest Comments

By Roger W3SZ

On the Tuesday before the contest I discovered that my rotor loop had dropped and I my azimuthal rotation was limited to 30-170 degrees. Thursday and Friday were spent working on a fix.

During the week I also added capability to my SDR software so that I could switch in and out direct digital audio and COM port connections to N1MM and WSJT-X with a mouse click, so that I could run the digital modes as well as the "standard" modes of SSB, CW, and FM easily during the contest.

So by Saturday morning everything was ready to go. Everything then ran without a hitch for the rest of the contest.

It was a really fun contest. I very much enjoyed using the new operating aids allowed by the new rules.

I used **one computer with 4 monitors**. One monitor was dedicated to aprs.fi to show the rovers. I really didn't need to use this because the rovers were identified via the N1MM Telnet/DX Cluster or by **direct text messages sent by them to me**. Two monitors displayed my SDR control software, N1MM windows, the N1MM Rotor window, and WinGrid. The fourth monitor was used for WSJT, the Firefox web browser that was used to display the ON4KST chat and the W4DEX/UHFQSO chat, and the Verizon Text Application. I put a screen grab of these 4 screens taken during the contest at: http://www.nitehawk.com/w3sz/wa3lbi_10G_JT4F.png

The "new methods" that I used and their relative usefulness for me were [ranked **highest to lowest**] as follows:

1. N1MM+ Telnet/DX Cluster function, showing both "standard" spots and #rvrstatus spots
<http://n1mm.hamdocs.com/tiki-index.php>
<http://n1mm.hamdocs.com/tiki-index.php?page=Telnet+Window>
<http://www.roverstatus.info/>

2. ON4KST IARU Region 2 144 and 432 MHz Chat page
<http://www.on4kst.org/chat/login.php?band=8>

3. Text messages sent and received directly from my computer using Verizon's "Message+" App so I didn't need to use my cell phone itself to handle text messages. I could stay focused on the computer. You can download this app from www.vtext.com. [This link won't work unless you are a Verizon customer, and when you use this URL you will be forced to log on to your Verizon account before you can get to this URL].

4. Phone calls sent and received from my cell phone

5. w4dex.com/uhfqso chat page.

The pros and cons of each of the above for me were:

1. N1MM+ Telnet/DX Cluster function.

PROS: Easy to keep track of. Integrated with N1MM+ so I just had to click on the spot and my radio was set to the mode and frequency of the spot, and the spotted call and info were entered into the N1MM+ Entry Window just by tapping the space bar.

CONS: none

2. ON4KST IARU Region 2 144 and 432 MHz Chat page

PRO and CON: Extremely busy, enough so that it was tough to keep track of at times. At some points there were 10 or more new messages every minute.

3. Text messages sent and received directly from my logging/SDR computer

PROS: Worked well. By using the Verizon app [available only to those with Verizon cell service] I didn't need to use the cell phone itself and could stay focused on the computer. You can see a picture of the app on my computer screen at: www.nitehawk.com/w3sz/VerizonTextApp.png and you can see a picture of the app on 1 of my 4 monitor screens during the contest next to my web browser and partially covering WSJT at: www.nitehawk.com/w3sz/PCTEXTAPP.png

CONS: None

4. Cell phone calls.

PROS: Worked great. Handy and fast and provided immediate results...

CONS: ...except when I didn't hear the phone ringing due to my wearing headphones with the volume cranked too high [Sorry Jim!!]

5. W4DEX / UHF QSO

PROS: A great idea!

CONS: Very little activity...so not useful to me. This was my sentimental favorite going into the contest, but it didn't have enough use by other Packrats to make it useful. Had more Packrats used it, it would have been valuable because then the lower volume of traffic would have been an advantage for Packrat-to-Packrat communications. Packrat-to-Packrat communications were easily lost in the ON4KST chat when it was very, very busy.

Except for #5, all of these utilities were very important to me and provided a **significant number of contacts**. The only one of these that I could have lived without was #5. With these utilities in play, there were no dull moments for me during the contest, and they greatly increased my enjoyment of the contest!!

My high points this contest were:

1. Working Jim Malone WA3LBI on 10G using JT4F [my first digital contact on 10 GHz]; it was the first test of the modifications I made to my SDR software so that I could use WSJT directly with it, with no cables. You can see the WSJT windows displaying this contact on the leftmost screen of the image noted above: http://www.nitehawk.com/w3sz/wa3lbi_10G_JT4F.png or you can see it extracted and enlarged here: http://www.nitehawk.com/w3sz/wa3lbi_10G_JT4F_Cropped.png Jim and I were both GPS-locked.

2. Calling Dale AF1T on cell phone after I heard him and Phil trying unsuccessfully to work on 2 meters CW, and running the bands [except for 903] up to and including 1296 with him as a result of this call.

3. Multiple 24 GHz contacts with Rick K1DS/R and Phil K3TUF.

I very much enjoyed each and every Packrat contact. It is extremely gratifying to participate in an activity where the end result is that each Packrat-Packrat contact benefits both the two communicating Packrats individually and also the Club.

The most interesting "negative" of the contest was finding out that there was a point source 5G interferer that wiped out the entire 5G band when I was pointed at Phil WA3NUF, but not if I went just **4 degrees** off his heading. Of course when moved 4 degrees off his heading I also degraded his signal...so I worked all the bands with him thru 10GHz except for 5G. I checked several times during the contest and this noise at his azimuth was always present. This noise raised my noise floor by 20 dB when I was pointed at him. This is shown by this URL:

http://www.nitehawk.com/w3sz/WA3NUF_Direction_Noise.png

The light blue at the top of the waterfall is the 5 GHz noise floor at 94 degrees azimuth. The orange/yellow is the 5 GHz noise floor at 98 degrees, which is the azimuth for WA3NUF from W3SZ. The dark blue band is the 5 GHz noise floor at 120 degrees, which is representative of the noise floor at 5 GHz in most directions at W3SZ. The orange/yellow band at the bottom is again the 5 GHz noise floor at an azimuth of 98 degrees, pointing at WA3NUF. Phil and I worked easily on all other bands from 50 MHz through and including 10 GHz. But this noise prevented me from hearing or seeing his signal on 5 GHz.

The most amusing thing that happened during the contest was finding out that my cardiology answering service got a call 2 years after my retirement asking if I was available to "run the bands on the microwaves". I wish I could have been there when they got that message.

I hope the above is helpful or at least interesting.

73, Roger W3SZ

Some Contesting Advice

In a comment on the VHF Contesting reflector, Jim, KK6MC gives some advice to relatively new VHF'ers on improving their operation. I agree 100% with his statement advising to **"be loud on 2 meters!"** A year or two after getting started as a new club member I upgraded my then 50 W solid state 144 MHz signal to running a pair of 4CX250's for 500-600 W output (with thanks to WA2OMY for help with construction!) ... it brought the band to life! My 144 score certainly showed it but as he said, it also gave me a lot more "qsy's" to the other bands.

The W3ICC/R is working on being LOUD on 2 meters! (We're looking for a 250 watt - class SSPA. Let us know if you know about one that's available).

73, Paul w2ped

W2SJ's Valentine

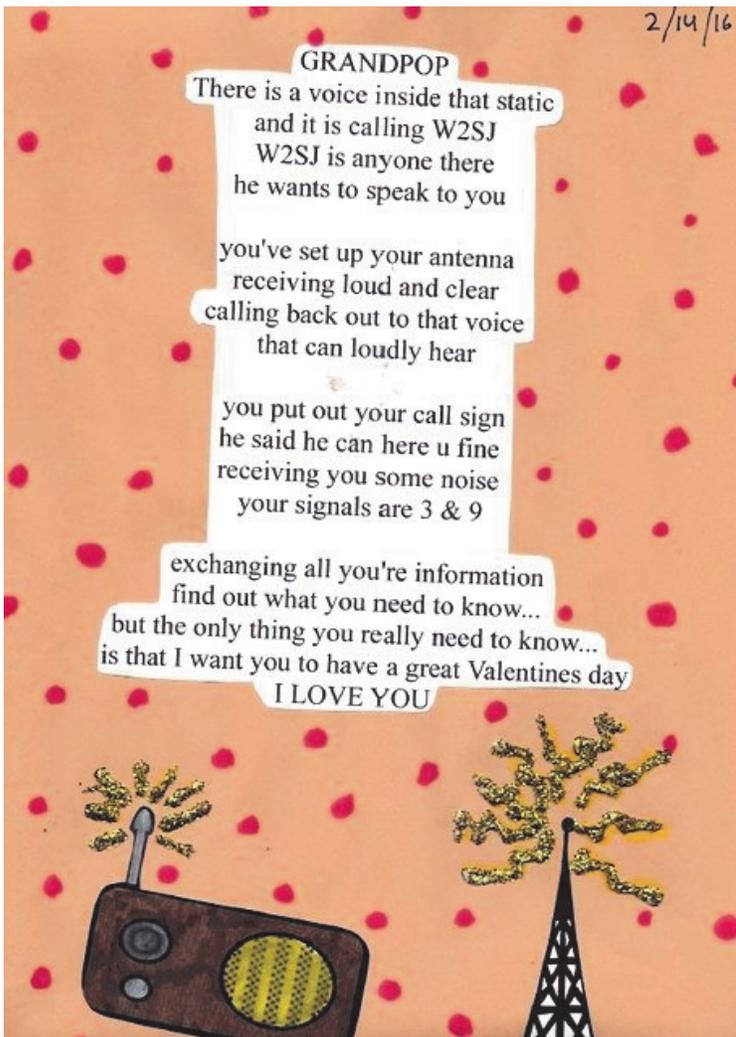

2/14/16

Lenny,

Returned home today after a hard day of delivering flowers in 15 degree weather... The attachment is a .pdf of the artwork my 11 year old granddaughter Lexie left on my desk in the shack.

She has been watching me build my new antenna system for months and asking questions about ham radio. Maybe a future member for the club!

73, Bob

A Raspberry Pi QRP Transmitter Shield

By Joe Muchnij, N8QOD

Although it's not VHF or UHF, I thought I'd share something vey interesting demonstrated at the recent TAPR Digital Communications Conference: a 20m transmitter built from a Raspberry Pi computer.

TAPR brought its developer, Zoltan Doczi HA7DCD to the conference from Budapest Hungary and will soon be selling his QRPI shield.

Zoltan has made digital contacts throughout Europe, as distant as 2400 km (~1500 mi) from his QTH using a simple outdoor random wire antenna only 2m above ground and the digital WSPR mode, developed by Joe Taylor K1JT (the open source software he used can be downloaded from <https://github.com/JamesP6000/WsprPi>).

The Raspberry Pi is an inexpensive (< \$40) computer available from many sources, including MCM.

Zoltan added a tiny daughter board that plugs directly onto it containing two filters, a 10 dB FET amplifier and a protection diode; it outputs 100 mW on the 20 meter band.

A full technical paper is in the 2014 Conference proceedings, available from TAPR.

Hints & Bits

Several decades ago, I published a `Hints & Bits` article in Cheese Bits similar to this about signal sources used for LNA tuning under on-the-air conditions.

Back in the 80`s I built a single transistor signal source with a 72 MHz crystal and listened to the harmonics on 144, 432, 1296 and 2304. A signal source makes it easy to tune up LNAs when they are connected to the antenna. I would put the source out in the woods, then rotate the antenna until I could barely hear it. Then tune the preamp for the best signal. Anything can be used for the source's antenna. A wire soldered to a connector or a coffee can feed both work well.

Years later in the early 90`s I made sources for 432, 1296 and 2304 that used a 1N34 glass multiplier diode and an interdigital filter. I also wanted to use them as frequency markers, so I put 60 deg C PTC thermistors on the crystals so the frequency wouldn't move. I ran the sources on the bench for a week to `age` them before measuring the actual frequencies. See the next to last article at http://www.packratvhf.com/Article_6/w3km_picks.htm for info on using PTC's. (BTW Steve N2CEI picked up on this and uses it in his products)

Recently I bought 2 used very low power beacons - a DEMI for 1296 MHz and an SSB Electronic 2400 MHz. The DEMI unit already has a PTC thermistor, so I'll put one on the SSB unit as well. I am ordering a crystal for the 2400 unit to put the output on 2304 MHz. Although the single transistor sources were designed for 9V battery power, I will use small 12V rechargeable packs for these 2 signal sources.

I worked lots of 2304 QSOs long before I ever heard the W3CCX 2304 beacon - it was always in the noise. So I want to use this SSB beacon to make sure my 2304 RX is working before contests. It didn't work in this January contest! But, that's not surprising, it is ~30 years old. Even though it always worked before, the LO crystals age and the LO probably just quit -- time to refurb.

Dave W3KM

Dayton VHF / Microwave Presentations Needed

The VHF/UHF/Microwave Forum at the Dayton Hamvention is schedule for Saturday May 21st from 3:15 to 5 PM.

I am looking for 4 or 5 presentations over a wide range of homebrew VHF/UHF/Microwave topics that may attract newcomers to the forum and to our favorite part of the spectrum as well as inform and enlighten the usual suspects. 15 minutes may seem a bit brief but as demonstrated in the past a well-organized PowerPoint presentation can be very effective despite the time constraint.

All that can be offered in the way of fame and fortune is that your name, callsign and the title of your presentation will be listed in the official Hamvention program and speakers are issued a speaker badge which will not only impress your friends and neighbors but permit complementary entry to the Hamvention.

If you have any questions please do not hesitate to contact me at WA8RJF@arrl.net or temanuele@ebulent.com

73, Tony WA8RJF

N3FA - RIP

With deep regret, I am forwarding sad news. The person behind the invasion of Red Rock Mountain (FN11) in June and September has passed this morning (2/1/2016)

Bob was the trustee of the famous K3 Yellow Traffic Light and Murgas Radio Club for many years. He has inspired VHF contesting and field day since 1975. Bob was quite sick for some time. During the rain swept Field Day in 2015, I took a picture of him operating CW for the 45th year in a row. His competitive nature will be sorely missed. I always enjoyed calling him my mentor. So knowledgeable in every aspect of ham radio. One thing in ham radio he would never do. "Never selling a high powered amplifier". Life was to short for QRP May my friend RIP
Herb K2LNS

Contest PackRatFinder App is Complete and Set To GO!

Thanks for the kind comments, suggestions, and bug reports regarding the PackRatFinder app! Development for the app is now complete and all known bugs have been eradicated.

The feature set of the app has been expanded and now includes:

[1] When first started, the app shows in red each band that a Packrat station has available and active "on the air".

[2] When the Packrat running the program works a station on a band, the cell for that band and that station changes from red to white.

[3] When the mouse hovers over a particular station's cell for a given band, a pop-up "tool tip" will show the date and time of that contact.

[4] The program is **interfaced with N1MM Logger+** so that when a contact is logged in N1MM, the cell for that station and band will change from red to white. If that contact is deleted in N1MM, the cell will change back from white to red.

[5] The program will generate both a display and a text file report showing each band worked for each Packrat included in the "Packrats to Look For" file, and that lists the time and date of each contact. The report also shows the total points made [exclusive of multiplier] by contacts with each Packrat, and the **total possible number of points that could have been made** by contacting that Packrat on every mutually available band.

[6] The main display also shows [in the third column] the number of **points that are still to be obtained** by contacting each Packrat on mutually available bands for which contacts have not yet been logged. This column essentially indicates work still needing to be done during a contest.

[7] **If one is not running N1MM Logger+**, the program can also be used in "manual" mode. In this mode, left clicking on a cell will "log" a contact by changing the cell color from red to white, and by recording the time that the contact was made, and right clicking on a cell will delete a "logged" contact. This can also be used to "add" a band for a particular station if it turns out that the station has a particular band working but that band was omitted for that station in the "Packrats to Look For" List.

I don't anticipate any further changes to the program unless bugs pop up. As before, the program can be downloaded from a link near the bottom of this web page:

<http://www.nitehawk.com/w3sz/PackRatFinder.html>

I decided to leave this as an executable file rather than making it an installed app as that gives each user more safety as there is no "installation" process to mess with your computer's operating system.

If someone wants an installer, let me know and I will send you an installer version, but there is no need for that and I am NOT using an installer version of the program here for me. And I advise against using an installer and will not warrant it to be problem-free [although I have never had problems or heard of any with any installer-version programs that I have created or distributed].

Please let me know if you have questions, problems, bug reports, complaints!

The Wayback Machine **In CHEESE BITS, 50 Years Ago**

(Nibbles from January 1966. Vol. VIII
12)

de Bert, K3IUV (*author's comments in
italics*)

- **MIA (missing in action).** The March, 1966 edition of Cheese Bits is one of the two issues that are missing from my collection. [The other is September, 1982]. An extensive search of attics, shacks, and other cubbyholes failed to uncover a surviving copy. So those of you that have become accustomed to reading the nostalgia from old copies, together with my commentary, will have to find other things to occupy yourself with this month. You might consider; 1. Cleaning out the shack; 2. Polishing your crying towel story; 3. Repairing gear that broke during the contest. 4. Make a winter trip to Puerto Vallarta, as I am doing this month; or, just resting your eyes. Or, why not take the time to write an article for Cheese Bits. **In another 50 years, you would then be in the nostalgia article.**

thirty, de K3IUV

VHF Super Conference Call for Papers, Pictures & Videos

Third Call for Papers and Presentations for the Super VHF Conference, April 15-17, 2016, near Washington, DC. Jointly sponsored by Packrats, NEWS Group, and SVHFS.

Details at <http://vhfsuperconference.com/>

Registration is now open!

We have a nearly full schedule of presentations, but we will find room for interesting topics.

Still looking for papers for the Proceedings on VHF, UHF, microwaves, and higher. All aspects welcome - operating, contesting, homebrewing, software, EME, surplus, antennas, test equipment, amplifiers, SDR, 47 GHz Superregen, whatever.

Pictures and Video - the Proceedings CD has room for material to supplement the Proceedings book. If you have some interesting pictures of VHF+ activity or projects, please send them. Short videos are also welcome. PLEASE give the files descriptive titles including your call.

N2CEI and W1GHZ will be coordinating the Proceedings.

Submissions and questions to:
scpapers@downeastmicrowave.com

73, Paul and Steve

RF Calculators

Doc, W3GAD passed along the following URL which has links to a couple of dozen special RF calculators. Its hosted by Pasternack Electronics.

Included are Antenna, Attenuator, Microstrip, Noise Figure, VSWR etc., etc.

<http://www.pasternack.com/t-rf-microwave-calculators-and-conversions.aspx>

The First Ever, VHF SUPER Conference

will be held at the **Holiday Inn Washington-Dulles International Airport,
Sterling, VA, April 14-17, 2016.**

If there ever was One VHF Conference to go to –This Is IT!

The Southeastern VHF Society (SVHFS), North East Weak Signal Group (NEWS) and Mt. Airy VHF Radio Club (Packrats) have come together to sponsor this VHF “**Super Conference**”. It is being hosted by the Grid Pirates Contest Group (K8GP) and Directive Systems and Engineering.

FOR FURTHER INFORMATION AND TO REGISTER FOR THE CONFERENCE GO TO VHFSUPERCONFERENCE.COM. THIS IS A RARE OPPORTUNITY TO MEET WITH AND HEAR FROM SOME OF THE TOP OPERATORS AND TECHNICAL MINDS IN VHF AMATEUR RADIO TODAY ALL IN ONE LOCATION. DON'T MISS IT!

Thursday, April 14: 10am-6pm Guided Bus Tour (3 hrs) of Washington DC, and afternoon stop at Smithsonian Area Museums 7pm-Hospitality Suite & Swap

**Friday, April 15: 8am-5pm Presentations, Vendors, Lunch with Speaker, Auctions
9am-4pm Washington DC Bus Transportation to Smithsonian/US Capitol/National Mall/Botanic Gardens area
7pm-Hospitality Suite & Swap**

**Saturday, April 16 8am-5pm Presentations, Vendors, Lunch with Speaker, Auctions
7pm-Banquet, Speaker, Awards, Door prizes**

Sunday, April 17 8am-11am Swap & Vendors

Special \$89+tax Hotel rate includes breakfast on Friday & Saturday. The \$89 rate is available from Tuesday, April 12 through Tuesday, April 19 Must confirm on-line or telephone reservations for “VHF Super Conference” using group code “E06” to get the discounted rate + Fri/Sat Breakfast.

Registration includes Lunch and all day beverages for Friday and Saturday!

Register before March 15 and **save up to \$30 each person**, on Registration, Banquet, and DC bus transportation total!

This is a beautiful time to visit the Washington, DC area with Warm Spring Weather and Cherry Blossoms!

Free Hotel shuttle to and from Dulles Airport & the Udvar-Hazy Air & Space Museum available daily.

June VHF - Contest - June 11 - 13, 2016. Details to follow.

SUPER CONFERENCE UPDATE

If you haven't already made your registration and hotel reservation, act quickly. There are over 100 registered to date and rooms at the conference hotel are filling quickly and the conference is about 40 days away.

Vhfsuperconference.com

This is a 2 day conference with all the "trimmings" including the usual hospitality, horse trading and flea, vendors, door prizes, presentations, banquet, and tours and sightseeing. It's a first for a multi- club sponsorship and cooperative. Be there!!

And we can also use more volunteer help for registration. So far we have 4 Packrats (me, Roger, Ray & Joe TN) but can use more. Let me know if you can help.

--Info from Rick, K1DS

A Year of Sunspots in 6 Minutes

Here's a movie of a year of sunspot observations from the NASA Solar Dynamics Observatory sped up to 6 minutes. Fascinating and almost hypnotic.
